Batuhan Saç

Junior .NET Backend Developer

batuhansac.dev

github.com/batuhansacofficial · linkedin.com/in/batuhansacofficial

Focused on C#, ASP.NET Core and REST API development. My portfolio projects emphasize clear API contracts, input validation, error handling and automated testing. Seeking Junior .NET Backend Developer opportunities.

TECHNICAL SKILLS

Backend: C#, .NET 10, ASP.NET Core, REST APIs, Minimal API, Razor Pages
Caching and HTTP: Redis, cache-aside, retry, timeout, circuit breaker
Testing and delivery: xUnit, integration testing, Git, GitHub Actions, Docker, Docker Compose

SELECTED PROJECTS

WeatherApiWrapper | .NET 10 · Redis · Docker

REST API exposing current, forecast and historical weather through normalized JSON models. Redis cache-aside, outbound HTTP resilience, standardized errors, and unit/application integration tests with controlled dependencies.

Unitwise | .NET 10 · Razor Pages · Minimal API

A stateless C# conversion engine shared by a web interface and JSON API. Five categories, rational intermediate arithmetic, absolute-zero validation and browser-local history. Razor Pages, Minimal API, xUnit and Docker.

ENGINEERING APPROACH

Shared services for application rules; explicit error contracts; unit and HTTP integration tests. Runnable environments with Docker, and repeatable build and test steps through GitHub Actions.
